

IN A TIGHT EMPLOYMENT MARKET, BUILD A VIRTUAL ROBOTIC WORKFORCE. PRODUCTIVITY SKYROCKETS / OVERHEAD BACK IN YOUR POCKET.

Our Latest Success

The Wells team brings proven success in robotic technology to the P&C insurance industry. We succeed because we know your business.

Our “*Robotic Process Automation*,” - developed by industry leader Blue Prism - is sold by PMWBG w Auro systems and replicates worker activity for virtually any operating tasks giving any business a second whole workforce at a fraction of the cost of human teams.

Carriers Generate Major Operating Savings at the Same Time Develop a Flexible Second Workforce.

Increasingly insurance professionals are now hiring as many workers as they need, at the same time foregoing the overhead costs from salaries, benefits, downtime, supervision and lost productivity. They are doing what no one thought possible, building a high performing *alternative workforce* with very little investment or ongoing operating expense – using today’s budgets instead for other projects like those that propel growth.

This remarkable opportunity is only possible licensing the sole source for virtual employment – modern **Robotic Process Automation** (or RPA) robotic work solutions.

RPA technology is software that plugs into virtually any operation to emulate what human workers do at the keyboard to provide equivalent task management for most work humans due with little to no downtime and at very little cost. This technology spreading worldwide is delivering unlimited workforce support for even the smallest companies; a workforce that doesn’t slow down, take breaks or receive benefits. The robots replicate every step human workers perform so more menial tasks that are nevertheless necessary (but more repetitive) transfer to technology freeing higher powered employees to focus on the things that change the game to your advantage.

Industry-wide Conversion Programs Occur Faster w RPA Now as more and more carriers are using new advances in management technology and platform hosting converting from old legacy systems to modern 3rd party cloud-based technology is made simpler and faster adopting RPA support for the program. RPA resources are especially valuable since it is often necessary to focus top talent to work on the conversion leaving a shortage of labor to maintain the business left behind. Here robots are easily integrated at limited additional cost and no need to recreate budgets to perform the tedious, must have work left behind. Essentially the same budget is stretched to do more with a whole virtual workforce available to relieve production pressure on the conversion team.

RPA technology is filling the gap performing the day-to-day required activity that simply needs to get done with a single robot performing the tasks that would be funded for any as 8 people. According to “Digital Insurance Magazine (Circa August 2018)” a Columbus, OH P&C writer plugged in 25,000 hours of virtual work support licensing a set of RPA bots - which usage utilizes half the potential of these systems leaving another 50% for implementing other tasks at no further cost.

In the DIM article – the bots replaced 12 people - however for one shift per day per person - leaving the 3 other shifts of a workday essentially open. The idea seems to be to get RPA technology started but overlooks the full potential that one bot can work as many as 4 shifts as well a supplement management oversight time, down time and breaks. In most instances, the dollar and cents comparison between licensing bots and budgeting for human workers can be eight human workers to one

When the demand for more workers is pressing, don't re-budget to hire – license robotic solutions at a fraction of the cost, with more than 8 times the throughput.

Robots tirelessly replicate the same work activity human workers do at a ratio of nearly 8:1 with associated savings.

Whether you lead technology, underwriting or claims, Blue Prism robotic automation technology from PMWBG will increase productivity, eliminate redundancies and make you money!

We make getting started easy with minimal disruption to daily activities. We partnered with Auro systems to complete your firm's launch so your license is a totally turn key solution with multi-year support built in.

We want to show you how this technology benefits new operational effectiveness and savings for your firm. Why not call for your no cost demonstration.

RPA SOLUTIONS - THE NEXT SOURCE FOR ALTERNATIVE EARNINGS UPSIDE AND IMPROVED OPERATIONAL EXCELLENCE.

SYSTEMATIZE MULTI-STEP TASKS THROUGH ROBOTICS PROCESS THAT INCORPORATES THE INDUSTRY LEADING ROBOTICS SOFTWARE AND SUPPORT FROM AURO AND BLUE PRISM

We Especially recommend RPA solutions at the time your firm migrates to new business management systems, web-based IT platforms, or transitions away from paper records.
